

Define Web Analytics. Mention two key metrics used in analyzing website performance.
What is meant by user behaviour in web analytics?
List components of an Information Retrieval system.
Explain the term “clickstream data” in web analytics.
Compare indexing and querying in IR systems.
Write practical applications of Information Retrieval in IT.
The purpose of KPIs in web analytics?
The key differences between metrics and KPIs with examples.
Discuss how server logs and APIs are used as data sources in web analytics.
Compare and contrast three retrieval models used in IR systems.
Analyze the impact of poor indexing on the performance of an IR system.
Explain the role of document representation in effective information retrieval.
Reflect on the importance of digital marketing in shaping user behaviour analytics.
Provide an example scenario where ranking is essential for search engine accuracy.

Analyze the interdependence between user behaviour analysis and search engine optimization (SEO) in the context of an e-commerce platform.
Discuss the flow of data from web logs to user insight reporting in a typical web analytics setup.
Evaluate the effectiveness of retrieval models (Boolean, Vector Space, Probabilistic) in delivering relevant results for different search scenarios.
A company wants to evaluate the impact of a UI change on bounce rate and session duration. How can web analytics be used to measure this change? (Take an example/case and explain)
Explain various ways in which clickstream data can be interpreted to improve digital campaigns.
Explain how average session duration and bounce rate together give insights into user engagement quality.
Discuss the significance of dwell time and exit rate in measuring website performance. Support with real-life implications.

List any 8 common web metrics used in website performance analysis.
Bounce rate? How is it calculated in web analytics?
Compare cookies and JavaScript tags in user tracking.
Name any two popular web analytics tools and state one feature of each.
State the importance of data visualization in dashboard reporting.
Identify advantages of using server logs over cookies for user tracking.
List applications of campaign analysis in digital marketing.
Explain how JavaScript tags help in real-time data collection on websites.
Discuss how bounce rate and conversion rate together provide insights about a campaign's success.
Compare Google Analytics and Matomo in terms of user tracking and reporting capabilities.
Analyze the role of data visualization in identifying key user engagement metrics.
Explain the process of collecting web data using cookies. Include its limitations.
Reflect on how campaign performance monitoring helps in ROI improvement.
Describe how a user tracking dashboard is structured using web metrics.

Analyze a scenario where bounce rate is low, but conversion rate is also low. What insights can be drawn?
Discuss the role of cookies, JavaScript tags, and server logs in comprehensive data collection strategies.
Evaluate a multi-channel campaign using key metrics like page views, dwell time, and conversion rate.
A company's dashboard shows a steady increase in page views but low session durations. Analyze this trend and recommend improvements. (Case-based)
Explain the difference between macro and micro conversions and how they are tracked in tools like Google Analytics.
Interpret a dashboard showing high bounce rate and high click-through rate for a blog post. What could this indicate?

Explain the importance of dwell time and conversion funnel drop-off in campaign analysis.

List 6 key metrics used to evaluate SEO performance.

What is meant by domain authority in SEO?

Differences between on-page and off-page SEO.

Define user segmentation and give one example.

Write the purpose of funnel analysis in tracking user behaviour.

Identify 4 tools used for keyword research and their unique feature.

Importance of behavioural segmentation in digital marketing.

Explain how technical SEO affects a website's ranking on search engines.

Discuss the process of optimizing web content using keyword research.

Analyze the effectiveness of backlinks and bounce rate in evaluating SEO performance.

Evaluate the benefits and limitations of using tools like SEMrush and Ahrefs for SEO audits.

Role of funnel visualization in mapping user journeys on a website.

Reflect on how user segmentation contributes to improved personalization in web campaigns.

Compare demographic, geographic, and behavioural user segmentation with examples.

Analyze the SEO strategy of a travel blog that has high domain authority but low organic traffic. Suggest reasons and improvements. (Case-based)

Evaluate a user journey through a multi-step sales funnel. At which stage might drop-offs occur, and why?

Discuss the impact of keyword stuffing and poor meta descriptions on bounce rate and dwell time.
